Profile

I am a computer scientist focusing on web development. I have excellent analytical and problem solving skills, and am able to discuss complicated concepts clearly. I am a U.S. citizen fluent in English and Russian, with some knowledge of Spanish. I love facing new challenges every day and am looking for a project to get excited about.

Experience

StarStreet, Developer   **September 2009 to May 2010**

StarStreet is a Cambridge startup that is building an online sports stock market. I joined as the first developer and contributed heavily at all levels, from the DB and business logic to the front end design and implementation. I made rapid progress using Ruby on Rails, JQuery, SQL, and HTML/CSS. StarStreet participated in the TechStars incubator program, through which I had access to amazing mentors and entrepreneurs who vastly expanded my understanding of marketing and business strategies relevant for startups.

HP - Software Developer / QA   **2007 to 2008**

During my time at Hewlett-Packard I participated in the development cycle of the Storage Essentials product.

- In 2007 I designed java utilities to graphically interpret log files for performance analysis.
- In 2008 I worked with the QA team. I set up an automated JUnit testing suite that ran overnight and e-mailed the test results to the team. I also wrote and maintained many of the tests.

Teacher's Assistant – Carnegie Mellon University   **Spring 2007**

I worked as a teaching assistant for "Concepts of Mathematics", a course introducing informal logic and the methods of mathematical proof.

Key Skills

Computer Languages:			
	Ruby on Rails	JQuery	C#
	Java	Javascript	C++
	HTML	CSS	C

Computer Skills:		
	Windows	MS Office
	OS X	MS Outlook
	Linux/Unix	

Education

Carnegie Mellon University

- BS in Computer Science with a Minor in Mathematics

Lincoln-Sudbury Regional High School – Sudbury, MA

- SAT I Score: 1580/1600
